Instructions for beginners

Abstract Reasoning Items:

Tests: CAISO, NAITOR, NEAITO, NOACT, NOAIS 2 Abstract Subtest, NOCTÆ, NOFRAT, SAITO

Each matrix contains a pattern governed by one or more logical rules.
The relationships between the elements may be sequential, associative, or analogical.
Items might have some numerical and/or spatial element.
Identify the rule(s) and enter the missing element.
Answers may consist of numbers, letters or a combination of both.

Spatial Reasoning Items:

Tests: CAISO, NAITOR, NEAITO, NOAIS 2 Spatial Subtest, NOCTÆ, NOFRAT, SAITO, SAT

There are two main types of spatial items:
Sets/Groups: The shapes or matrices are related according to one or more underlying spatial rules.
Your task is to identify these relationships and determine the missing element.
Sequence: The shapes or matrices follow a logical progression.
Your task is to identify the pattern and determine the missing element.
Some items combine both types of reasoning and may involve both 2D and 3D spatial transformations.

Logical (divergent thinking) Items:

Tests: CAISO, NAITOR, NEAITO, NOACT, NOAIS 2 Logical Subtest, SAITO

There are two types of logical items:
Logico-divergent: These items require inductive and flexible reasoning.
You must infer the intended logic from the information provided.
Items require considering alternative interpretations.
Perception: These items require you to relate the information presented to a real-world object, concept, or situation.
Your task is to recognize the intended connection and use all available clues to determine the correct answer.
Some items combine both types of reasoning.
Answers may consist of numbers, letters or a combination of both.

Numerical Reasoning Items:

Tests: CAISO, NAITOR, NEAITO, NOACT, NOAIS-Form 2, NOCTÆ, NOFRAT, SAITO

The numbers follow one or more underlying mathematical operations (such as addition, subtraction, multiplication, division, or exponentiation) and/or logical rules or patterns.
Your task is to identify these rules and determine the number(s) that should replace the question mark(s).
Some items may involve more than one rule operating simultaneously.
Use all of the information provided in the item to determine the correct answer.

Verbal Reasoning Items:

Tests: CAISO, NAITOR, NEAITO, NOACT, NOAIS-Form 2, OVAT33, SAITO

There are four types of verbal items.
Analogies: The first element has the same relationship to the second as the third has to the fourth.
Your task is to identify the element that completes the analogy.
Associations: A group of words is connected by a common idea, concept, or object.
Your task is to identify the shared connection.
Cipher: The item contains a hidden message that must be deciphered.
Sequence: The words follow a logical sequence or progression.
Your task is to identify the missing element.
A combination of types is also possible; part of the test is recognizing which kind of item is presented.
Some items may have more than one correct answer, particularly those involving synonyms.
However, keep in mind that words often used interchangeably in everyday language may not be technically equivalent in certain contexts.
